

## High antioxidant • High phenolics • High flavonoids

Cherinol is the most unique cherry supplement available. This is because it is made only from wild, remote-source chokecherries, and it is raw. Thus, it is completely different than the commercial types. These are tiny cherries relished by wild beasts and are far more potent in medicinal powers than the typical hybridized types. This truly wild chokecherry extract is made from chokecherries which grow in the deep forests of North America. They can only survive in remote, unaltered areas far from humans.

The red, blackish color is a sign of the potency, which is astounding. Furthermore, this chokecherry extract is then combined with wild oregano essence, which also serves to naturally preserve Cherinol. This proprietary preservation method ensures that the most bioavailable nutrients are never compromised with heating or chemical additives.

Chokecherries grow on large shrubs or small trees. It was the Native Americans who showed the colonists the medicinal benefits that they found in chokecherry and how they made a bark tea. It was also an ingredient in tonics and extracts and was also applied directly to the skin.

The ORAC capacity of choke cherry is 99% to 145% higher than the Sas katoon berry, wild blueberry, raspberry, strawberry, and sea buckthorn. Thus, this is among the most potent of all antioxidant berries known. This powerful antioxidant blend with live enzymes is much more active than commercial extracts, which are heat treated. Cherinol is pure, concentrated nutrition. No additives, heat, solvents, or chemicals are ever used. This product comes to you cold-pressed and handpicked. It is a rich source of potent phenolic compounds, including caffeic, cinnannic, and benzoic acids. Try the wild power as it was meant to be.

**Directions:** Take twenty or more drops of this potent extract under the tongue twice daily. For maintenance take at least 10 drops daily. Also add to water, juice, or milk.
