

Natural grape resveratrol

Resvera-Flo is truly a powerful food supplement of the most exotic nature conceivable. A true food, this potent source of nutrition is a concentration of muscadine grape skins in its most pure and unadulterated form, along with extract of raw, wild grape. The well-published powers of muscadine grape skins lie in its heart-healthy resveratrol and ellagic acid concentration. Resveratrol is a polyphenol providing the key nutrition of red grapes. Ellagic acid, another polyphenol, is found also in grapes and berries. Muscadine grapes hold a richer concentration of resveratrol than regular grapes, up to 7 times higher.

Since the resveratrol in Resvera-Flo is natural and unaltered, it is far more biologically potent than the typical health food supplements. Unlike other resveratrol supplements, Resvera-Flo is formulated strictly from grapes. All other supplements are extracts, from the Japanese knotweed plant. When the resveratrol is extracted from this plant, a noxious substance, known as emodin, is also extracted. An irritant, emodin can cause diarrhea and stomach distress. In contrast, Resvera-Flo does not contain any other substances other than muscadine grape concentrate.

Muscadine grape concentrate is the key means to getting the daily dose of resveratrol and other critical polyphenols. These grapes have up to 40 times more antioxidant flavonoids and polyphenols than regular red grapes. The key flavonoids/polyphenols found in Resvera-Flo listed in order from highest to lowest concentrations are resveratrol, catechin, epicatechin, gallic acid, and ellagic acid. Thus, Resvera-Flo is truly one of nature's most potent sources of antioxidants—all natural and biologically available. The wild, raw purple grapes add to the potency, while providing much-needed wild, raw enzymes for metabolism. Wild grape extract is also a dense source of both resveratrol and ellagic acid.

Is wine a better source of resveratrol over the concentrate? Actually, there is no comparison between the two. Because of the heavy use of pesticides and herbicides that weaken the plants, wine is almost entirely devoid of resveratrol. In addition, wine and other grape products do not contain ellagic acid, which is a highly potent flavonoid that works synergistically alongside the resveratrol. Browse for yourself on the web. Resvera-Flo is the only grape-source resveratrol/ellagic acid supplement available. In muscadine concentrate alone, there are dozens of types of ellagic acid along with their derivatives. These work in synergy with resveratrol. To reap the maximum benefit of resveratrol, it is critical to take it with ellagic acid. The ultimate benefit of Resvera-Flo is being the preferred combined source of resveratrol, ellagic acid and all other powerful benefits that these densely colored purple grape skins have to offer.

Directions:

This is a highly potent concentrate. Minimum dosage is one teaspoon. Optimal dosage is up to two teaspoons. Can be drizzled on yogurt. For maximum benefit, take straight.
