

Sinu Orega

Multi-Spice Nasal Wash

Fungi and mold spores are alive in our environment. They flourish in the air we breathe because of spring rains and the subsequent moisture that settles. They enter our bodies through nasal passages and then thrive upon the sugar in our diet. Consequently, it is very important to not only keep our environment free of the things that allow mold and fungi to flourish, but also our bodies. Unfortunately, these environmental factors can render some defenseless against sinus infection.

Sinusitis is very prevalent in the American population and has been found to affect up to 37 million people, which is nearly 1 in every 7 Americans. Nearly 70 percent of sinus infection sufferers are prescribed antibiotics, which may not only be ineffective but also may lead to antibiotic resistance. Many health practitioners agree that the use of a saline solution to flush out the nasal passages is the best approach. Flushing of the nasal passages has even been found to work more effectively than merely spraying a mist of saline solution into the nasal passages.

SinuOrega is the superior choice to aid in the cleansing process of the nasal membranes. Combined with the powerful, wild-crafted essential oils of Oreganol P73, sage, bay leaf, and clove, the pure sea salt in springwater base acts as a powerful saline wash. SinuOrega is a truly natural nasal spray, free of all chemicals and additives.

How to use SinuOrega:

Insert nozzle next to inner nasal membrane and gently squirt. Immediately sniff contents deeply to distribute throughout the sinuses. Repeat with each nostril. For best results sniff deeply. Repeat as needed. Temporary burning, stinging, sneezing or increased nasal discharge may occur. Non-addictive.
