

Natural source of vitamin C, ellagic acid, and potassium

Strawbenol is the only raw, wild, remote-source strawberry extract available. Remote-source strawberries grown on unaltered soil are exceedingly rare. No chemicals are used, and unlike those grown in California (even organic) these are grown far from any pollution. Plus, rather than the typical soil of industrial farming, this soil is rich in black humus. Strawbenol is the only raw strawberry extract available containing wild strawberry. Additionally, since it is raw the enzymes are intact.

Because of its remote-source and wild nature, Strawbenol is higher in ORAC than normally grown strawberries. While commercial strawberries score some 1500 per 100 gram in ORAC value, Strawbenol is 2460, which means it is over 30% more powerful than the farm-raised type.

Strawbenol is raw, so it can be taken as a whole, unaltered food extract. It is a natural source of ellagic acid and vitamin C. Again, the vitamin C in Strawbenol is raw and natural. This is strawberry like you have never experienced, because the raw, remote-source extract is the most potent strawberry extract available. It's also the most delicious tasting strawberry extract, rich in naturally occurring flavonoids and polyphenols. Enjoy the health benefits of the remote wilderness.

How to use Strawbenol:

Take as drops under the tongue, at least 40 drops daily. Also it may be added to yogurt or juice. Add to orange or grapefruit juice for an excellent beverage. For better health take Strawbenol every day.
